

The award-winning series Life & Science takes an entertaining look at the work done by various scientists active in the field of biology and their positive impact on human health. The research projects featured are at the forefront of the life sciences and have led to many ground breaking innovations.

In Season 2, entitled "What we have in mind", we explore the field of neuroscience: The nervous system and its pathologies. How do brain cells network and connect to one another? Can we re-generate tissue in the nervous system? Can we eliminate post-traumatic stress without erasing memories?

Life & Science's format combines interviews with leading scientists and patients with dramatization, animation and the most captivating cinematography.
